

## Access to drinking water and sanitation services in NKODABEL

**Figure 1: Geographical map of NKODABEL**

NKODABEL is a village located 5 KM south of the district of Evdoula, department of Lekié, Centre region, Cameroon.

**Figure 2: Connection equipment to CAMWATER's water distribution networks**

CAMWATER was able to equip itself during the period from October 21, 2024 to November 15, 2024 with equipment for the realization of connection works relating to the pending

connection requests of the populations of the Evodoula District and its surroundings to facilitate access to drinking water and sanitation services.

**Figure 3: Population of NKODABEL leaving the drinking water supply point**

Despite all its efforts, from CAMWATER and the government, the people of NKODABEL face difficult access to drinking water and basic sanitation services.

NKODABEL does not have a drinking water supply point and toilets, which exposes the population to waterborne diseases (cholera, dysentery) and also to the phenomenon of open defecation, which is recurrent.

In addition to this, the people of NKODABEL are facing the effect of climate change which is drying up rivers and streams.

It is with this in mind that the people of NKODABEL are asking for the intervention of international NGOs, international donors, development partners and the private sector to opt for the implementation of autonomous solutions at NKODABEL such as: boreholes, good fountains, cubitainers and public toilets.
